

ARCTICSTORE™ UPDATE....

It has been a busy summer and early autumn for the ArcticStore team. In July the acquisition of Container Exchange was completed. The container records were successfully transferred to our operating system and Tim Davis joined the team in the Enfield office.

The original ArcticStore container cold stores continue to be improved with ongoing refurbishment and retrofitting of new machines at 5 UK locations.

New orders are only satisfied with modern cold stores and we continue to swap out the older equipment where and when convenient.

Brand new cold stores are continuously being introduced to the fleet. These include our new XXL - 37 UK pallet capacity – 3 palletwide model as well as the more common AP models.

We have also started supplying cold stores with controlled or modified atmosphere facilities to help prolong shelf life of especially fresh fruits.

We have also been busy expanding the ambient container fleet with new 20' units arriving in UK depots. Conscious of environmental issues these incorporate bamboo floors instead of tropical hardwood ply floors.

If you don't already receive the benefits of greatly reduced running costs and improved performance cold stores contact ArcticStore!
